

# R&S®HFH2-Z2E ACTIVE LOOP ANTENNA

8.3 kHz to 30 MHz

Broadband active loop antenna for measuring magnetic field-strength components

The R&S®HFH2-Z2E active loop antenna measures the magnetic field strength in the LF, MF and HF range. It can be used for EMI measurements in line with various standards (i.e. CISPR, MIL, FCC, ANSI, ETSI).

Each antenna is individually calibrated.

It is characterized by an almost frequency-independent antenna factor and very high sensitivity.

In strong field environments, an attenuator can be activated to reduce distortion. An integrated RF detector with a threshold circuit reports overload of the antenna.

The antenna is supplied via a coaxial cable using the optional R&S®IN600 bias unit.
